It has been brought to my attention that my game was incorrectly linked to (actually, I just password protected the directory it was in, forgetting people other than me might wanna access the brain-killing fun that is BrickBASH!). So I have fixed that, and uploaded a zipped version without an installer for people with restrictions on installing stuff.

If you haven't checked out my famous game before, you don't know what you are missing! Of course, once you find out, you'll wish you were still missing it, but it'll be too late by then!
